SUMMARY

Junior Full-Stack Web Developer with hands-on experience building backend-focused applications, with an emphasis on reliability, maintainability, and practical problem solving. Experienced in developing REST APIs, working with relational and NoSQL databases, implementing authentication, transactional workflows, background processing, and automated testing. Familiar with technical documentation, Git-based collaboration, Docker, CI/CD, and Linux-based development, with a strong focus on understanding and building software systematically.

SKILLS

Languages : JavaScript (ES6+), TypeScript, SQL, C++, C, Python, Lua
Frontend : React.js, HTML5, CSS3, Vite, Tailwind CSS, Material UI
Backend : Node.js, Express.js, REST APIs, JWT, OAuth, API Design, Authentication & Authorization
Databases & Caching : PostgreSQL, MongoDB, Mongoose, Redis, Data Modeling
Testing & Debugging : Jest, Supertest, Unit Testing, Integration Testing, E2E Testing, Debugging
Development & Deployment : Git, GitHub, Docker, GitHub Actions, CI/CD, Linux, Bash, Render, Vercel
Documentation & Tools : Technical Documentation, Postman, Bruno, Neovim, VSCode

PROJECTS

Project Title : E-Commerce Backend

🔗 [\[Source Code\]](#) 🔗 [\[Live Demo\]](#)

Tech Stack : Node.js • Express.js • PostgreSQL • Redis • Stripe • Docker • AWS • CI/CD

- Built REST APIs for products, inventory, orders, users, and role-based access control.
- Implemented PostgreSQL data models, transactional workflows, and Redis-based caching.
- Integrated Stripe payments with webhook-based order and payment state handling.
- Added automated tests and Docker-based development workflows.

Project Title : Distributed Job Queue Service

🔗 [\[Source Code\]](#) 🔗 [\[Live Demo\]](#)

Tech Stack : Node.js • BullMQ • Redis • Docker

- Built a background job processing service using BullMQ, Redis, and concurrent workers.
- Implemented retries, backoff strategies, job lifecycle handling, and dead-letter queues.
- Built a dashboard for tracking jobs, workers, retries, and failures.
- Containerized the service for reproducible local development.

Project Title : Multi-Tenant Inventory / HRMS SaaS

🔗 [\[Source Code\]](#) 🔗 [\[Live Demo\]](#)

Tech Stack : Node.js • React.js • PostgreSQL • Redis

- Built a multi-tenant application with organization isolation, RBAC, and granular permissions.
- Implemented inventory and employee workflows using PostgreSQL and transactional operations.
- Added audit logging and activity tracking for organization-level actions.
- Developed a React interface for managing users, roles, inventory, and organizations.

Project Title : Document Storage Service

🔗 [\[Source Code\]](#) 🔗 [\[Live Demo\]](#)

Tech Stack : Node.js • AWS S3 • CloudFront • Docker

- Built a document storage API using private S3 buckets and signed URLs.
- Implemented controlled file uploads, downloads, and document access.
- Added metadata handling and asynchronous file processing.
- Containerized the service with Docker.

Project Title : Real-Time Messaging Service

🔗 [\[Source Code\]](#) 🔗 [\[Live Demo\]](#)

Tech Stack : Node.js • WebSockets • PostgreSQL • Redis • Docker

- Built a real-time messaging service with WebSocket-based communication and persistent message history.
- Implemented users, channels, message history, and role-based access control.
- Used PostgreSQL for persistent data and Redis for presence and real-time event coordination.
- Implemented connection handling, message pagination, and unread message tracking.

EDUCATION

B.Tech in CSE (2021 - 2025)

Supreme Knowledge Foundation

Maulana Abul Kalam Azad University of Technology

West Bengal, India
